

20 August 2024

To the Shareholders of GAM Star Fund p.l.c. - GAM Star Worldwide Equity (the "Sub-fund")

Dear Shareholder,

We are writing to advise you of certain updates being made to the Sub-fund which will come into effect on or around 20 September 2024.

Words and phrases used in this notice shall, unless otherwise provided, have the same meanings as are ascribed to them in the prospectus of the Company (the "**Prospectus**").

Which changes are to be made to the Sub-fund?

The Sub-fund, GAM Star Worldwide Equity will undergo the following modifications:

- (1) Name Change:** The Sub-fund's name will be changed from GAM Star Worldwide Equity to GAM Star Global Equity.
- (2) Investment Objectives and Policies:** The investment policy of the Sub-fund is being updated to provide that up to 40% of the Sub-fund's net asset value (as opposed to up to 20%) may be exposed to emerging markets.
- (3) Benchmark Change:** The benchmark will transition from the MSCI World / USD Average 1 Month Deposit Rate to the MSCI AC World NDR which captures large and mid cap representation across 23 Developed Markets and 24 Emerging Markets countries. With 2,760 constituents, the benchmark covers approximately 85% of the global investable equity opportunity set.

The Sub-fund will be actively managed in reference to the benchmark by virtue of the fact that it will use the benchmark in the appropriate currency for performance comparison purposes but also by virtue of the fact that it will use the benchmark for risk mitigation purposes in order to mitigate its exposure to overweight currencies (arising from its equity investments) into one or more currencies in which a constituent of the benchmark is designated and in relation to which currency, the Sub-fund is underweight in comparison to the benchmark. However, the benchmark will not be employed to define the portfolio composition of the Sub-fund and the Sub-fund may take meaningful positions in securities which are not constituents of the benchmark.

When will the changes come into effect?
